Who Are We...

*Tindall Drywall & Metal Framing, Inc. was founded by John (Pete) Tindall.
For over 30 years Pete worked hard to develop a
company he could be proud of.
Whether building a home or a much larger project, his focus always remained
on the outcome of a project. He recognized the responsibility
and maintained that everything should be perfect.
Simply put... He Cared.*

*After Pete succumbed to cancer in 2004, the business continued.
His family and employees carried on and we try every day to meet the
standards Pete placed on all of us. We understand that to provide a
quality product you have to go the extra mile, do more, care more.
We think our customers agree and promise to continue our efforts
and hope we can make a difference.*

Service

Service is one of the three goals of Tindall Drywall & Metal Framing, Inc. There will be many questions and issues to work through during the drywall process. New standards, new products and custom work needs to be considered and we will work with you to help you with those decisions.

Quality

The drywall is one of the most important aspects of a project and we understand that you want a flawless finish. We pride ourselves in using only the best hangers/finishers and subcontractors.

Dependability

First we strive to give you accurate timelines for the finished product. Secondly we are dependable and will be there when we say we will. If at any time after completion of a job you have a question or a repair is needed, we will handle it promptly.

Our Guarantee

Simply stated, we guarantee our work. If you find that a repair is needed due to faulty product we will repair that for free. We stand by our workmanship and although it is rare, there are times when a repair is needed. Of course we will come in and make small repairs if something unexpected happens after the drywall is finished but we offer a warranty that goes beyond the expected. Details can be found in our Warranty Agreement.

Custom Homes

Tindall Drywall & Metal Framing, Inc. has become the contractor of choice for builders who are dedicated to quality construction with excellent craftsmanship, solid state of the art construction, classic features, and service beyond the sale. By working in harmony with builders/owners we pay close attention to detail, quality and service.

Many of the builders we work with are award winning and we share the commitment to excellence that they strive for in their projects.

In addition, if you are a Owner/Builder you will get that personal attention you need. Our consultation process is extensive and our knowledge allows us to help with a myriad of issues that will avoid future problems. From the planning stage to the finished project and beyond, we are at your disposal. Call us for a consultation and we will assess your needs, discuss special features (see Products) and help you build the home of your dreams.

New Residential

When it comes to production building we understand the special needs of a builder to produce quickly but also maintain quality. Job coordination is crucial. Our project manager, superintendents, employees and sub-contractors work diligently, side-by-side other trades to maintain a schedule that allows us to get the job done quickly.

Fast does not mean compromising on quality; our expertise in scheduling and fast follow-up guarantees meeting those deadlines.

Commercial Retail

We understand how important trust is in a contractor / client relationship. Our clients rely on us to serve on their behalf, ethically and responsibly. Our commitment to them shows before we become a member of the team. Our knowledge and advance research of a project allows us to offer expert advice based on our attention to detail.

Tindall Drywall & Metal Framing's approach is based on a clear understanding that in order to succeed, clients need to receive more than they expect.

Our clients value the relationship we build with them and recognize our commitment to quality, budget and schedule.

Tenant Improvement

Tenant improvement is one of the largest areas of commercial construction activity throughout the U.S. Every day there are countless offices being remodeled, facilities being upgraded, and employees being relocated. We work closely with you to make sure deadlines are met and the project stays on time.

Demolition

Common problems of demolition disasters is lack of pre-planning. An extensive analysis of the site allows us to determine issues such as architectural salvage, asbestos cleanup and hazardous waste disposal. Dismantling and disposal are all important and must be considered carefully.

Metal Framing

We live in an area where structures must be durable enough to meet the highest windload specifications required to withstand the natural forces of hurricanes. Did you know that steel can help provide that strength?

For that matter buildings are lightning resistant because steel framing provides multiple conductive paths directly to the ground. Schools and public buildings are more resistant to fire because steel is non-combustible and complies with fire codes and regulations.

Buildings are constructed with metal studs that are impervious to termites and other wood destroying insects. Steel-framed buildings are energy efficient when properly insulated, and because steel is dimensionally stable, metal studs will not expand or contract with humidity changes.

Why use anything else!

Remodels

If you have ever remodeled your home, you know the disappointment of wishing you had done something different after the fact. When it comes time to remodel, if you have all the right "ingredients", you won't have those disappointments. One of those ingredients is a contractor who, not only installs the product but offers invaluable foresight that will help you identify problems and do it right the first time.

Products

Call it drywall, sheetrock or wallboard, it consists of a gypsum core with a coarse paper backing and smooth paper face. Sounds simple but it goes way beyond that. Today there are a variety of products including mold resistant, water resistant and soundproof board.

If you are concerned with the humid climate in the south you can choose special mildew resistant board.

There are a variety of soundproof products and we can explain the difference. Do your plans include a bonus room or a media room? You will want to use soundproof boards there as well as any place where you would like less noise filtering into other areas of the home or building.

Homes, offices and commercial buildings now have the choice of many special effects. We use Trim-Tex drywall products to produce architectural results that are amazing. Tray ceilings, crown molding, curved ceilings and walls, archways, columns and niches all become design elements that will set your home or office apart. We call it Drywall Art and you can see why when you visit www.tindalldrywall.com.

And we're not done yet! What finish you choose can make a difference. Do you want a smooth wall finish? How about orange peel or splatter knock down? Should it be heavy or light? We can show you the difference and help you make that choice.
